1. WAP to perform all basic arithmetic operations such like +, -, *, and / operations by implementing method overloading using total 2 classes.
   - use only one method named calculate() in child class
   - if you pass 2 arguments, perform division
   - if you pass 3 arguments, perform subtraction
   - if you pass 4 arguments, perform multiplication
   - if you pass 5 arguments, perform addition

2. WAP to implement method overriding by following below mentioned criteria:
   - Class Cricket -> Class T20Match
   - Class Cricket -> Class TestMatch
   - override getTotalOvers() method in both classes
